BuildMyWebsiteAI • Beginner Deployment Guide

How to Put Your Website Online for **FREE** in 2 Minutes (Zero Coding or Technical Skills Needed!)

Congratulations on creating BuildMyWebsiteAI Website!
You don't need any coding skills, servers, or credit cards to launch your website online. This easy guide walks you through putting your website on the internet completely **FREE** so you can share your live link with anyone.

1. What's Inside Your Downloaded ZIP File?

File Name	What It Does	Quick Tip for You
index.html	Your main homepage. Contains all your sections, content, and interactive booking modal.	**Instant Preview:** Double-click this file right now on your computer to view your website in Chrome/Edge without internet!
style.css	The design system, custom colors, fonts, and responsive layout for mobile and desktop.	Works automatically with your HTML pages. No need to touch or edit.
Additional Pages (e.g. *about_us.html*, *services.html*)	If you selected a multi-page website, all subpages and custom pages are included here.	Every page includes full navigation links back to Home and other pages.
Deployment SOP PDF	This beginner-friendly guide so you can re-deploy or reference anytime.	Keep safe on your computer for future reference.

STEP 0 (FIRST STEP): UNZIP YOUR FOLDER
• **On Windows:** Right-click your downloaded ZIP file ➔ Click **'Extract All...'** ➔ Click **'Extract'**.
• **On Mac:** Double-click your downloaded ZIP file.
Now you have an unzipped normal folder containing index.html and style.css ready to upload!

2. Deploy on Vercel (EASIEST & RECOMMENDED — 100% Free, 1 Minute)

Vercel is the fastest way to get your website online. Just **drag and drop** your unzipped folder into your browser. No coding, no terminal, and no Git required!

Step	Simple Action to Take	Helpful Detail
Step 1	Open your web browser and go to **https://vercel.com**. Click **'Sign Up'** (free with Google or GitHub).	100% free account with zero credit card required.
Step 2	From your Vercel Dashboard, click the blue **'Add New...'** button (top right) ➔ Select **'Project'**.	Opens the quick import project screen.
Step 3	**Drag & Drop:** Grab your **unzipped website folder** from your computer and drop it directly onto the upload box on the screen. *(Or go to vercel.com/new and drag your folder there)*	Vercel instantly receives all your HTML and CSS files.
Step 4	**Quick Settings:** • **Project Name:** Enter your website name (e.g. my-business-site) • **Framework Preset:** Choose **'Other'** • **Root Directory:** Leave default (./) • **Build Command:** Leave **BLANK** (pure static HTML needs no build step)	Takes less than 10 seconds to verify.
Step 5	Click the black **'Deploy'** button. Within 15 seconds, confetti appears on your screen and your site is **LIVE**!	You get a free secure link: **https://your-site.vercel.app**

3. Deploy on Render (100% Free Cloud Hosting)

Render is another popular free cloud platform that hosts your static website forever with zero server maintenance. You can deploy it directly via the GitHub website using simple point-and-click upload — **no terminal commands or coding needed!**

Part A: Upload Your Files to GitHub (Using Browser Drag & Drop)

Step	Browser Action	Notes
A.1	Go to **https://github.com** and create a free account (or log in).	GitHub securely holds your website files in the cloud.
A.2	Click the **'+'** icon at the top right corner ➔ Click **'New repository'**.	Opens the repository creation page.
A.3	Type a **Repository name** (e.g. my-website). Keep it **Public**. Click the green **'Create repository'** button.	Do not check README or .gitignore.
A.4	On the next screen, click the text link that says **'uploading an existing file'**. Select all files from your unzipped folder (index.html, style.css, etc.) and drag them into the browser box.	All files will upload into GitHub in a few seconds.
A.5	Scroll to the bottom of the page and click the green **'Commit changes'** button. Your files are now safely uploaded!	Your website files are ready for Render.

Part B: Connect Your Repository to Render (1-Click Launch)

Step	Render Configuration Action	Exact Setting Needed
B.1	Go to **https://dashboard.render.com** and sign in using your GitHub account.	Free lifetime static site account.
B.2	Click the blue **'New +'** button (top right) ➔ Select **'Static Site'**.	**Important:** Select 'Static Site' (not Web Service).
B.3	Find your repository (e.g. my-website) in the list and click **'Connect'**.	Links your code to Render's CDN.
B.4	**Fill in 3 simple fields:** • **Name:** Enter your website name (e.g. my-business-site) • **Branch:** main • **Build Command:** Leave **COMPLETELY BLANK** • **Publish Directory:** Type a single dot . (period)	**Key Setting:** Setting Publish Directory to . tells Render your index.html is in the main folder.
B.5	Click the blue **'Create Static Site'** button. In ~45 seconds, your website is online with free SSL protection!	Live URL: **https://your-site.onrender.com**

WHICH SHOULD YOU CHOOSE? VERCEL OR RENDER?

- **Choose Vercel** if you want the absolute easiest 60-second method: drag your unzipped folder straight into the browser.
- **Choose Render** if you prefer keeping a backup copy of your website files on GitHub.

Both platforms are 100% free forever, super fast, and give you a secure https link!

4. Want Your Own Custom Domain? (e.g. www.MyBrand.com)

If you already bought or want to buy your own custom domain (from GoDaddy, Hostinger, Namecheap, Google Domains, etc.), both Vercel and Render allow you to connect it **100% free** with automated SSL (green padlock security):

HOW TO CONNECT YOUR CUSTOM DOMAIN:
• **On Vercel:** Open your project ➔ Click **'Settings'** ➔ Click **'Domains'** ➔ Enter your domain (e.g. mybrand.com) ➔ Vercel will show simple DNS settings to copy into your domain provider.
• **On Render:** Open your static site ➔ Click **'Settings'** ➔ Click **'Custom Domains'** ➔ Add your domain name ➔ Add the simple CNAME record provided.
Within a few minutes, your website will open at your own professional custom web address!

5. Testing Your Live Website (Quick Checklist)

Once your website is deployed, test these 4 quick features to make sure everything looks great:

1. Test On Your Mobile Phone: Send your new live URL to your phone via WhatsApp or email. Notice how your site automatically adapts to mobile screens with a touch menu!
2. Click All Page Links: If you built a multi-page site (About Us, Services, Contact, etc.), click the links in your navbar to ensure smooth navigation.
3. Try the Interactive Booking Button: Click 'Book Appointment' or 'Get Started'. An interactive popup appears directly on screen so your visitors can schedule appointments.
4. Try Entering a Phone Number: Notice the built-in phone number validator (+91 country code) prevents visitors from accidentally submitting invalid contact numbers.

6. Frequently Asked Questions (FAQ) for Beginners

Common Question	Simple Answer
Does this cost any money?	**No! 100% Free.** Both Vercel and Render offer free tiers that have no expiration date and easily handle everyday business visitors.
Do I need to keep my computer turned on?	**No.** Your website is stored on high-speed global cloud servers that operate 24 hours a day, 7 days a week, worldwide.
Can I change the text or images later?	**Yes!** You can go back into BuildMyWebsiteAI Studio to adjust content and download an updated ZIP, or open index.html in Notepad to change wording.
Where can I share my new website link?	You can put your link on WhatsApp status, Instagram bio, Google Business Profile, business cards, Facebook, or send via email to clients.
